Cablofil

EZ-Path Firestop

EZ-Path from Cablofil provides total containment and fire protection in both data communications cabling, low and high voltage wiring network applications. It installs in minutes and new cables can be added or existing wiring removed without the need for additional fire stopping.

EZ-Path offers maximum resistance to fire whether it is empty or 100% visually full. Fast-acting intumescent performance: features a built-in firestopping system that automatically adjusts to the number of cables installed. Exposed to fire or high temperatures, this intumescent material responds to flames or heat by quickly sealing the pathway and preventing the passage of flames and smoke.

Certified product: EZ-Path installations offer fire-rated floor and wall constructions up to 240 minutes in accordance with the main European standards, BS 476: Part 20, DIN 4102-9 and EN 1366-3, and the American standard ASTM E814(UL1479).
