Power outlet unit mounting: Horizontal power strips provide up to 12 outlets and mount to any EIA 19" rack or cabinet. Vertical Power strips provide up to 30 outlets and do not occupy any rack space

Power outlet unit packaging: Power outlet units include 10' power cords, plugs, mounting brackets, screws and tool-less buttons

key features and benefits

Scrolling power meter	Displays true RMS current reading for all three phases by scrolling through each phase, providing critical information on phase load balancing and improving power manageability for network reliability
Color coded receptacle configuration or labeling	For easy identification and load balancing
UL Listed	UL & c-UL Listed to 60950
Vertical mounting	Enables positioning of power strips, closer to active equipment eliminates power cord slack and improves flexibility of power outlet unit mounting locations
Mounting discs	Allows tool-less mounting of power strips for faster installations
Circuit breakers	Interrupts circuit over-current conditions minimizing, potential power disruption for increased reliability

applications

Panduit POUs safely and efficiently manage and distribute power to allow multiple pieces of equipment to share a single power connector to enhance scalability of network build outs. Built-in power meters and circuit breakers provide the critical power information and protection for improved network reliability.

Mounting flexibility allows quick and easy installation and when used with Panduit Net-Access™ and Net-SERV™ Cabinets the user receives a complete networking solution that will satisfy data center requirements today and into the future.

What is 3 Phase DELTA?

3 Phase DELTA from 208V Source

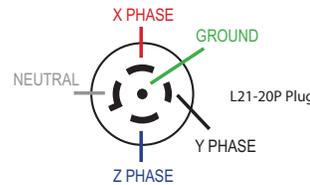

A 3 Phase DELTA is a 4 wire configuration consisting of 3 phase conductors (X, Y and Z) and a Ground. Without the neutral present, only phase to phase wiring is possible. The potential between any two phase conductors is typically 208V.

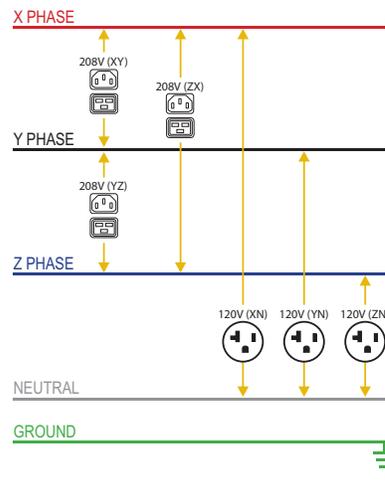

What is 3 Phase WYE?

3 Phase WYE from 120/208V Source

A 3 Phase 120/208V WYE is a 5 wire configuration consisting of 3 Phase conductors (X, Y and Z), Neutral and Ground. The potential between any 2 phase conductors is 208V. The potential between any phase and neutral is 120V. This configuration can be wired to provide 120V, 208V or a combination of both voltages within one PDU.
