TX6A[™] 10Gig[™] UTP Patch Cords with MaTriX Technology

specifications

Category 6A/Class E_A, UTP patch cords shall be constructed of 23 AWG stranded copper cable with an enhanced performance modular plug on each end. Copper conductors in patch cable shall be twisted in pairs and separated by a quadrant separator. All four pairs shall be surrounded by matrix tape and a flame retardant jacket. The patent pending matrix tape shall suppress alien crosstalk and allow 10 Gb/s transmission. Patch cord cable shall be offered in multiple colors and lengths for design flexibility with a strain relief boot on each modular plug. All patch cords shall be compatible with both T568A and T568B wiring schemes.

technical information

Category 6A/Class E _A channel performance:	Certified channel performance in a 4-connector configuration up to 100 meters and exceeds the requirements of ANSI/TIA-568-C.2 Category 6A and ISO 11801 Class E _A standards for supporting 10GBASE-T transmission over twisted-pair cabling systems as part of the Panduit® TX6A [™] 10Gig [™] UTP Copper Cabling System
Headroom warranty:	Guaranteed performance beyond the standard when a complete end-to-end TX6A [™] 10Gig [™] UTP Copper Cabling System is installed by a Panduit certified installer
Cable diameter:	0.275 in. (7.0mm) nominal
FCC and ANSI compliance:	Meets all applicable ANSI/TIA-968-A requirements; contacts plated with 50 microinches of gold for superior performance
RoHS compliance:	Compliant
IEC compliance:	Meets IEC 60603-7
PoE compliance:	Meets requirements of IEEE 802.3af and IEEE 802.3at for PoE applications
UL rated:	UL 1863 approved
Flammability rating:	СМ

kev features and benefits

Compatible with components of the TX6A-SD [™] 10Gig [™] UTP Copper Cabling System with MaTriX Technology (70 meter solution) for increased design flexibility
Provides superior suppression of both PSANEXT and PSAACR-F; improves the installation flexibility by allowing cable combing in existing pathways without compromising performance
Confidence that each patch cord delivers specified performance
Provides the highest margins above the industry standard for both electrical and alien crosstalk performance
Improved cable management in high density applications enabling easier installations
Performs in center of ANSI/TIA-568-C.2 component range ensuring interoperability and superior performance
Optimizes performance, consistency, and reliability by reducing untwist at plug
Prevents snags and provides easy release, saving time and providing reliability on frequent moves, adds, and changes
Provides easy access in high-density applications
Rated to 2500 mating cycles
Provides identification of performance level, length, and quality control number for future traceability
Meets individual length and color-coding requirements for greater system flexibility
Color-specific keys with positive and negative keying features mechanically and visually distinguish connections to prevent unintentional insertion into unlike keyed or non-keyed ports, offering network design flexibility, versatility, and accommodating discrete networks for enhanced security
Snap onto cable, allowing additional color-coding options
Secures plug into jack to prevent unauthorized removal of patch cord

applications

The TX6A[™] 10Gig[™] UTP Patch Cords with MaTriX Technology are a component of the TX6A[™] 10Gig[™] UTP Copper Cabling System. Interoperable and backward compatible, this end-to-end system provides design flexibility to protect network investments well into the future. Key applications include:

- 10GBASE-T Ethernet
- Data center I/O consolidation
- · Data center server virtualization
- Consolidation of network interconnects
- · Back-bone aggregation
- Parallel processing and high speed computing
