key features and benefits

100% performance tested	Assurance that each patch cord will deliver the critical electrical performance requirements
Documented metrics	Insertion loss data recorded for every patch cord
Lifetime traceability	Test data is traceable to a QC number on each patch cord
Metallic continuity element	Provides continuity through the patch cord enabling the PanView iQ™ System to robustly monitor patch cord connectivity
Variety of lengths	Meets individual length requirements

applications

Panduit's PViQ™ System Hardware, which includes intelligent patch panels, modules and cabling, seamlessly feeds information directly into the Physical Infrastructure Manager (PIM™) Software Platform to provide continuous real-time patch field monitoring and visibility of physical infrastructure connectivity for enhanced system reliability and security and capacity management.

The PViQ™ Fiber Patch Cords are a component of the PViQ™ System. With certified performance to TIA/EIA-568-C.3, these patch cords are ideal for today's high performance fiber applications. The metallic conductor enables robust monitoring of the fiber patch field with the PViQ™ System.
