About Your Cameraless Monitoring Appliance

Thank you for purchasing this NetBotz cameraless monitoring appliance. NetBotz 420E and NetBotz 320E monitoring appliances have been designed specifically for environments where a built-in camera is not desired or necessary. As these appliances do not have a built-in camera, camera-related Advanced View and NetBotz Central tasks will not be available for use when monitoring or managing a cameraless appliance.

Functional Differences

Specific examples of services that are not available or that perform differently when used with a cameraless NetBotz appliance are:

- Camera Settings task will not be available
- Camera Motion Sensor Settings task will not be available
- Images will not be displayed in the Sensor Readings pane of the Advanced View
- Cameraless appliances cannot be licensed to use NetBotz Surveillance
- Alert notifications for add-on sensor generated by cameraless NetBotz appliances cannot include pictures.
