

FS200 Series

2 Port Fast Ethernet Speed/Media Converting Switch

AT-FS201-xx

2 port Fast Ethernet switch, IO/IOOTX to IOOFX (ST), 2km

AT-FS202-xx

2 port Fast Ethernet switch, IO/IOOTX to IOOFX (SC), 2km

AT-FS232-xx

2 port Fast Ethernet switch media converter 10/100TX to 100FX (SC), 2km

AT-FS232/1-xx

2 port Fast Ethernet switch media converter IO/IOOTX to IOOFX (SC), I5km

AT-FS232/2-xx

2 port Fast Ethernet switch media converter 10/100TX to 100FX (SC), 40km

Extend Networks

The FS200 series switches are the ideal solution when the time comes to upgrade your traditional 10Mbps Ethernet network or extend your 100Mbps Fast Ethernet network. The FS200 series is designed to extend the distance of your network by converting Fast Ethernet data between twisted pair cabling and singlemode fiber-optic cabling. The FS200 features a 100FX fiber-optic port features an SC connector and an operating distance of 2 kilometers (6,561 feet) to 40 kilometers (24.9 miles) depending on the model. The twisted-pair port has an RJ-45 connector with a maximum operating distance of 100 meters (328 feet).

VLAN Support

Many new backbone switch products now support the industry standard IEEE 802.1Q specification for Virtual LANs (VLANs) that send extra-long data packets on the network. The FS200 switches are fully compatible with these long packets, enabling them to be used in modern networks. Switches not supporting this feature will discard these extra long packets, making them unsuitable for modern networks.

Small and Flexible

The small size and external power supply of the FS200 series allows them to be used almost anywhere. Additionally, they can be mounted in a chassis along with Allied Telesis' media converters, allowing users to construct any mix of network conversions when they add the optional redundant power supply.

MissingLink™ and Smart MissingLink™ (SML)

The MissingLink feature allows the ports on the media converter to pass the Link status of their connections to each other. When the media converter detects a problem with a port - such as the loss of connection to a node - it shuts down the connection to the other port, thereby notifying the node that the connection has been lost. The Smart MissingLink (SML) feature monitors network connections and provides notification when network segments fails, allowing network managers to quickly identify the source and location of failed segments and minimize downtime.

Key Features

- · Convert speed as well as media type
- Auto MDI/MDI-X
- MissingLink (ML) (AT-FS232 only)
- Smart MissingLink (SML) (AT-FS232 only)
- Supports 1532 bytes frame
- Support for multi-mode and single-mode fiber
- · Supports half and full-duplex operation
- 2k MAC address tables
- Store-and-forward switching mode
- Transparent to IEEE 802.1Q packets
- Standalone or rack-mountable
- Rack-mountable using optional AT-MCR12, AT-TRAY4, or AT-TRAY1 chassis
- Wall-mountable using AT-WLMT

AT-FS201 and AT-FS202

Status Indicators

System LEDs

Indicates power is applied to the Power

converter

Per Fiber Port:

Link/Activity Indicates valid/invalid link

Indicated data is being received or

transmitted

Full-duplex/Collision Indicates operation at either full or

half-duplex

Indicates collision during transmission

on the port

Per Copper Port:

Link/Activity Indicates valid/invalid link

Indicates data is being received or

transmitted

Indicates operation at either full or Full-duplex/Collision

half-duplex

Indicates collision during transmission

on the port

Indicates port is set for auto-Auto-negotiation

negotiation

100M Indicates operation at either IOT or

Operational Characterisitcs

(Each port can be configured via the following switches)

Per Fiber Port:

Duplex Selects either full- or half-duplex

operation

Selects maximum packet size sent by Bytes

switch (1518 or 1522 bytes)

Per Copper Port:

Speed

Bytes

Selects auto-negotiation mode or Auto

manual setting

Forces port to full or half-duplex Duplex

operation

(Auto setting = manual only) Forces port to 10 or 100Mbps

operation (Auto setting = manual only)

Selects maximum packet size sent by switch (1518 or 1522 bytes)

MAC address table 2k addresses

Forwarding/Filtering Rate

148,880pps for 100Mbps

14,880pps for 10Mbps

Latency 14.3 µ sec

(64 byte packet, 100Mbps full-duplex)

Operational Mode

MissingLink (ML) Link Test

AT-FS232, AT-FS232/I and AT-FS232/2

Status Indicators

System LEDs:

Power Indicates power is applied to the

converter

Mode status Indicates operating mode, MissingLink,

Smart MissingLink and Link Test

Per Fiber Port:

Link Indicates a valid receive link exists Indicates full or half-duplex operation **Duplex** Collision Indicates collision during packet transmission on the port

Per Copper Port:

Link Indicates a valid receive link exists Indicates either 10 or 100Mbps operation Speed Auto Indicates port is set for auto-negotiation

FD/Collision Indicates collision during packet transmission on the port

Indicates full or half-duplex operation

Operational Characteristics
