

NEW CATALOG ITEM

ORGANIZING. STORING. SECURING.

FEATURES:

- Complete tool-less assembly.
- Made of strong, heavy gauge aluminum with an excellent load to weight ratio: 25 lb. shelf supports up to 160 lbs. while taking up less than two RMU of space.
- Locks in the closed position. Detents open easily with accessible front lock levers providing greater stability while accommodating deep servers. Maximum usable shelf space of up to 32".
- Offered with a cable management belt that provides greater flexibility in the storage of wire bundles. No kinking, bending, or cutting ensures cables remain securely attached to computer components.
- Flexible cable management belt is made from flame retardant materials.

32" DEEP MEGAFRAME® SLIDING SHELF

We have improved our equipment storage solution with CPI Style in mind. This 32" deep shelf includes an advanced cable management solution that eliminates cable storage issues. Sold individually and available in three finishes.

Supporting a maximum load of 160 pounds and using less than two RMU of mounting space, this shelf is designed for 36" and 39" deep MegaFrame cabinets and frames. The shelf has an adjustable mounting depth of 28" to 40.5" and is offered in either a vented or non-vented style. The vented style is designed to optimize airflow within the cabinet. The shelf extends a full 32" and is offered in two dimensions: 19"W x 32"D version with a 52"L cable management belt and 23"W x 32"D version with a 52"L cable management belt.

Unlike most storage solutions that may cause kinking, twisting, and cutting of signal and control cables during shelf extension and retraction, and are designed to take up valuable surface space when controlling cables in your storage environment, CPI's shelf addresses these issues. The flexible polycarbonate belt, which fits in the rear undercarriage, is the solution to these problems. This belt easily attaches to either the left or right side of the vertical bracket to allow for optimal cable feed. The belt contains eight molded releasable clips that accommodate cable bundles measuring up to 1.00" in diameter. Cables are quickly and easily added with a simple flip and snap of the molded clips with one hand. This cable management system offers ease of access and maintenance, without wasting surface area space.

Address your cable management needs with a flexible storage solution in CPI Style. Please contact your local authorized CPI Distributor or CPI Customer Service Representative for more information.
