

Model 38-52-CCOANT

Adaptor Doors

Oberon's Model 1052-00 wireless LAN access point enclosure is a locking 2' x 2' ceiling tile enclosure originally designed for the Cisco 1242. With many Cisco customers making the migration from the Cisco 1242 to the Cisco 1260/3500e/3600e series 802.11n wireless access point, Oberon has designed the 38-1052-CCOANT adaptor door so that customers may install the new access point in the existing enclosure, without removing the enclosure from the ceiling. The upgrade simply requires that the existing 1052-00 door is removed (three interior nuts), the new access point is attached to the adaptor door, and the adaptor door is attached to the enclosure. The upgrade maintains the enclosure's UL 50 design criteria, and provides the same level of physical security as previously provided. Upgrades are performed without accessing the air handling space above the ceiling.

1) Model 1052-00 shown with 38-52-CCOANT door, 3500e AP (not included), and Cisco AIR-ANT2430V-R and AIR-ANT5140V-R antennas (not included)

Specifications:

- Adaptor door designed to mount the Cisco 1260/3500e/3600e series 802.11n wireless access point into existing Oberon Model 1052-00 ceiling tile enclosures
- With adaptor door properly installed, the assembly is UL listed and designed to meet NEC300-22 and 300-23 for plenum installations
- Construction: Textured white powder-coated steel, 14 ga. door
- Fully hinged locking door, keyed alike.
- Adaptor door is attached to enclosure with (3) nuts

Model 38-52-CCOANT Includes:

- Adaptor door
- Assembly mount bracket and nuts
- Installation instructions
