Remotely Managed Fast Ethernet NID (Network Interface Device)

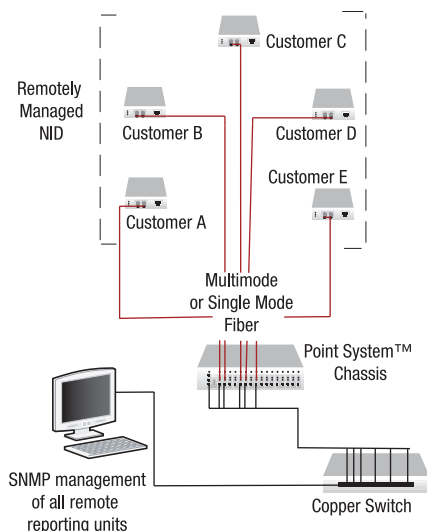

With the Remotely Managed Fast Ethernet NID, service providers can now monitor and manage the entire optical link from the Central Office (CO) to the Customer Premise Equipment (CPE). They also have the ability to remotely change the bandwidth offered to the customer in increments of 64Kbps and choose the appropriate mode of connection straight from their Network Management Centers.

Devices should be used in pairs. Typical installation will include a chassis card installed in the Point System™ locally and a stand-alone device (SRMFE pg. 81) installed at the remote location.
