## *Monitored Smoke Detectors*

Whether you are home or away, monitored smoke detectors are always heard. There is no better way to protect your loved ones and possessions from the ravages of fire. Installing GE Interlogix ESL 500N smoke detectors with your security system significantly increases the chances that everyone will get out safely and help will arrive quickly in the event of a fire.

## *Quality from GE Interlogix*

With GE Interlogix professionally installed smoke detectors, you can have the same confidence in your smoke detectors that you have when you turn on a light! Make sure your security and life safety consultant installs GE Interlogix products in your home.

## *Smoke Detector Technology*

Most homes have battery operated ionization smoke detectors. These detectors react quickly to flaming fires but usually take longer to detect smoldering fire – the most common type of fire that occurs in homes. GE Interlogix ESL 500N smoke detectors utilize photoelectric smoke detection technology. Photoelectric smoke detectors continually analyze the air for smoke particles and are more sensitive to smoldering fires than ionization detectors. Installing both ionization and photoelectric smoke detectors in your home provides the best possible protection for you and your family.
