

Preconnectorized “Stubbed” Hardware

A Corning®
Solutions Product

features and benefits |

Reduces the amount of part numbers	Reduces inventory; cost savings
Decreases installation time	Increases revenue
Factory installation	Improved connector performance and quality
Available in any combination of hardware style, cable type, connector type and fiber count	Variety of deployment and installation options

Corning Cable Systems Preconnectorized (“stubbed”) Optical Hardware is equipped with factory-terminated and -tested cable assemblies pre-installed in a variety of hardware products. “Stubbed” hardware is terminated in the factory according to the requirements of the Corning Cable Systems Quality Standards. This ensures connector performance and quality, therefore eliminating the time-consuming and costly process of terminating cables in the field. It also reduces the amount of part numbers needed for installation and minimizes the line items on an order. Available in various combinations of hardware style and cable and connector type, the housings come partially or fully loaded.

Note: One “U” = One industry-standard rack space of 1.75 in.
