

AXIS Q87-E Dual PTZ Network Camera Series

Thermal detection, HDTV and PTZ surveillance all in one.

- > HDTV image quality
- > Thermal imaging
- > H.264 video streams
- > IP66-rated
- > Continuous rotation, endless 360° pan

AXIS Q87-E Dual PTZ Network Camera Series is ideal for mission-critical surveillance scenarios that demand 24-hour monitoring of restricted areas. The cameras offer pan/tilt flexibility and simultaneous video streams from a visual camera and a thermal camera, and allow detection, recognition and identification from one single unit.

The IP66-rated, outdoor-ready AXIS Q87-E Network Camera Series comprises of AXIS Q8721-E and AXIS Q8722-E. AXIS Q8721-E — which provides a visual camera with 10x optical zoom and autofocus, and a thermal camera with 384x288 resolution—is mounted on a motor that allows the entire unit to tilt and pan. AXIS Q8722-E provides the same features but with a thermal camera that offers VGA 640x480 resolution. The models are connected to the network using one Ethernet cable.

AXIS Q87-E models can pan 360° endlessly and tilt between -45° to +20° with a preset accuracy of 0.02°. The operating temperature ranges between -30 °C to 45 °C (-22 °F to 113 °F).

The thermal camera can achieve higher detection accuracy than a visual camera since a thermal camera detects an object or a person hidden in a shadow or in a dark area. It can also function in complete darkness and adverse weather conditions. However, the visual camera allows for recognition possibilities and at night, it can benefit from optional PT IR Illuminator kit A for better identification. The combined visual/thermal camera units provide a powerful surveillance solution.
