

Model 1010-00

Right Angle Wall Mount Bracket for Wireless Access Points

Many wireless access point manufacturers recommend that the access point be mounted in a horizontal orientation to achieve best wireless coverage. Horizontal mounting may be difficult in hard lid and other environments where the access point is mounted on the wall. Oberon's Model 1010-00 wireless LAN access point wall mount bracket is designed to mount and secure access points from most manufacturers in areas where wall mounting may be required. This aesthetic, white powder coated steel mounting bracket is ideal for mounting the access point in the preferred horizontal orientation in residence halls, hotels, and other hard lid venues. Conduit, raceways, and cable can be terminated in the bracket to provide for a clean appearance. The access point can be locked in place using the access point manufacturer's locking features.

Features and Specifications:

- Designed to enable wireless access points to be mounted in preferred horizontal orientation
- Integrated T-bar segment accommodates access points from most vendors
- Knockouts on two sides for cable ingress
- Can be mounted directly over telecommunications outlet
- Textured white powder coated steel construction
- Size: 9" deep x 6" wide x 5" tall
- Shipping weight: approximately 2.5 lbs
