

AXIS Q60-C PTZ Dome Network Cameras

High-speed PTZ domes with active cooling: AXIS Q6042-C/Q6044-C/Q6045-C

- > Operate in temperatures up to 75 °C (167 °F)
- > Outdoor-ready; meet military standard
- > Up to HDTV 1080p; powerful zoom
- > SFP slots for fiber, RJ45 connections
- > I/O for alarm in/out

The top-of-the-line AXIS Q60-C PTZ Dome Network Cameras provide exceptional and reliable surveillance in environments such as deserts, where high ambient temperatures and solar radiation require cameras to operate in extreme heat. The outdoor-ready AXIS Q60-C cameras are ideal for use at construction and open-pit mining sites, along pipelines, and for city surveillance.

With a built-in active cooling system, AXIS Q60-C cameras can operate in temperatures up to 75 °C (167 °F). The robust cameras meet the tough military standard, MIL-STD-810G, ensuring reliable operation in harsh weather conditions such as sandstorms.

With resolutions up to HDTV 1080p, AXIS Q60-C cameras enable 360° pan for wide area coverage and powerful zoom for capturing details. AXIS Q6042-C and AXIS Q6044-C support electronic image stabilization for more useful video in windy conditions. In fog, AXIS Q6044-C can provide clearer video with its automatic defog functionality.

The supplied media converter switch allows AXIS Q60-C cameras to be connected in a daisy chain to the network using standard network or fiber optic cables that help lower the cost of installing the cameras over long distances. The switch also enables the cameras to connect to external alarm devices via input/output ports, and to 12 V power.

AXIS Q60-C cameras have day/night functionality and enhanced capacity for intelligent video. Built-in analytics include autotracking and Active Gatekeeper. AXIS Q6045-C offers additional analytics such as fence detector, object removed and enter/exit detection.

Mounting brackets are sold separately.

Reliable operation in searing heat

AXIS Q60-C PTZ domes ensure reliable surveillance in demanding environments. The cameras are tested to meet the tough MIL-STD-810G standard for high temperature, temperature shock, radiation, rain, humidity, salt fog, sand and dust.

Robust, high-performance cameras

AXIS Q60-C cameras are designed for round-the-clock pan/tilt/operation, with 360° endless pan and high zoom for coverage of an extremely wide area. AXIS Q6045-C, for instance, can capture the license plate of cars up to 275 m (900 ft.) away. The cameras can be automatically directed to 256 preset positions using guard tour.

Engineered for handling extreme heat

AXIS Q60-C cameras use Peltier technology to increase the operating temperature to 75 °C (167 °F). The advanced climate control also handles rapid temperature changes to eliminate condensation on the clear dome cover. The system ensures that the cameras always operate at an optimal temperature to reduce wear and tear to maintain the cameras' lifetime.

Peltier element (1) draws heat out of or into the camera as needed; forms part of the barrier separating the camera unit from the outer environment. (2) Fan. (3) Heat sinks. (4) Air-tight camera compartment; no air flow between camera unit and outer part. (5) Heat inside is transferred out. (6) Warmer air out (7) Cooler air in.

System schematic

An AXIS Q60-C connects to the supplied AXIS T8605 Media Converter Switch using an IP66-rated multi-connector cable [1], which attaches to the camera with a simple click. Through the media converter switch, the multi-connector cable enables the camera to receive power (power supply [2] not included), and send and receive data to and from external alarm devices and the network. Two SFP slots and two RJ45 connectors in the media converter switch give installers the flexibility to network the cameras cost-effectively over long distances in a daisy chain or in a ring

topology for increased reliability in the event of a single point of failure. (IGMP filtering is not supported and ring topology requires a switch supporting IEEE 802.1D Spanning Tree Protocol). The RJ45 connectors can also be used for connection to complementary cameras such as a thermal camera or temporarily to a laptop to service the system locally. With bayonet connection [3], an AXIS Q60-C camera attaches easily to Axis' standard mounting accessories. Support for shock detection enables the camera to trigger an alarm if it has been hit.
