### DESCRIPTION

Thanks to its characteristics of reliability, robustness and accuracy, this positioning unit is the ideal solution for demanding security applications, including: traffic and highways control, coastal and harbour monitoring, borders, stadiums and industries surveillance, prisons, military installation and perimeter watching. The area is always monitored, thanks to the speed and detection accuracy of the target.

The IP-based versions with integrated server for compressing analog data of videos and telemetry allow a network integration for a full control of all the PTZ functions via network. These models support the ONVIF protocol and are integrated by Milestone XProtect® Suite.

The optimal functioning is ensured in very hot and very cold environments, thanks to a sophisticated system of defrosting. The firmware update can be carried out remotely.

<sup>1</sup> To ensure the performances, the two illuminators must be correctly aligned.

<sup>2</sup> ASS: auto slow shutter mode set

<sup>3</sup> HFOV - Horizontal Field of View: width of the illuminated area at the maximum reachable distance.

The distances are in meters and refer to the displaying of images at night time which have enough quality to identify and classify an abnormal situation and the type of subject within the range of the pan & tilt unit. The distances also depend on the reflection coefficient of the surfaces present on the illuminated scene.
