PRODUCT APPLICATION

Seismic Protection Systems

Chatsworth Products, Inc. (CPI) Seismic Protection Systems reduce the risk of equipment damage by stiffening, bracing and stabilizing racks and rack-mounted equipment to comply with structural recommendations. When planning installations in seismically active regions, CPI helps reduce the approval cycle by obtaining California's Office of Statewide Health Planning and Development (OSHPD) Pre-Approval (OPA) numbers for several IT infrastructure products. In compliance with earthquake design criteria, CPI's Seismic Protection Systems protect equipment so it remains operational when subject to earthquakes.
