Aimetis Enterprise Manager™ provides cloud-based centralized management for distributed Aimetis Symphony video management software (VMS) or physical security appliances (PSA). Managed servers connect securely to Enterprise Manager, enabling you to deploy software updates, manage settings and monitor status and performance through an intuitive and powerful web-based dashboard, all from the cloud.

Highlights

- Unified visibility and control of the entire deployment via a single web-based dashboard

- Reduce deployment time and maintain consistent configurations by inheriting settings from the cloud

- Remotely manage software updates

- Centralized server backups

- Automated monitoring and alerts

- VMS operation uninterrupted if connectivity temporarily lost to Enterprise Manager

- Intuitive interface eliminates costly training or added staff

- Connections to Enterprise Manager secured via SSL and uses minimal bandwidth (~30KB per hour)

- Firewall friendly, servers make outgoing connections

- Highly available and secure data centers (PCI / HIPAA compliant)

- Private Cloud option available

- Flexible subscription-based licensing

Specifications

Supported Products

Aimetis Symphony 6.14+

Aimetis Physical Security Appliances running 6.14+

Licenses supported: Standard, Professional, Enterprise

Management

Managed via the web using secure browser-based dashboard

Centralized administration of managed products

Role-based administration

Configure server backups locally or to cloud

Software Management

Inventory of installed Aimetis software

Automatic software update of on-premise products

Policy Management

General settings

Users

User group permissions

Maintenance settings

Monitoring

Hardware vitals

Compliance monitoring

Storage, RAM and CPU usage, outage monitoring

Deployment models

Public Cloud - Aimetis provides and manages infrastructure

Private Cloud - Customer provides and manages infrastructure

Policy Configuration
