

### Polishing Machine Cleaning Essentials

When polishing the ferrule of the connector it is essential that the process is kept clean, this ensures accurate and repeatable polishing. The recommended products to be used in the polishing process include lint-free tissues and de-ionised water.

Lint-free tissues are a versatile consumable for many applications. They are mainly used to clean bare fibre as part of the termination or splicing process. The lint free characteristic allows them to be used for a multitude of other purposes such as cleaning optical equipment and preparing work surfaces.

#### FEATURES

- Super fast absorbency
- Can be used dry or with fluid
- Removes and absorbs dirt / grease /water / chemicals
- Tear resistant
- Strong non woven material
- Material: 44% wood pile tissue & 56% Terylene
- Size: 100mm x 100mm
- Thickness: 0.05mm
- Absorbency rate: 560%
- Absorbency speed: 5 seconds
- Class:10000
