The NVT Model NV-EC1701 Ethernet-over-Coax EoC Transceiver is a compact media converter that allows 10/100 BaseT Ethernet and PoE+ power to be transmitted using coax cable. These devices are often used in legacy installations where existing cable is re-deployed as part of an upgrade to IP cameras. 48 or 56VDC class 2 power is delivered to one transceiver, which distributes it to multiple* remote transceivers, and their PoE, PoE+ or High Power PoE cameras.

These transceivers are extremely simple to use, with no IP or MAC addressing required. Status LEDs indicate power and link connectivity/activity for RJ45 and BNC ports. They are backed by NVT's award-winning customer support and limited lifetime warranty.

* Distance and number of devices supported will often be lower due to power delivery voltage-drop on the cable. See Cable Distance Chart on page 5 and 6.

Model NV-EC1701 EoC Ethernet over Coax Transceiver with PoE, PoE+, or High Power PoE

Cable Type and Power Distance Capacity

The distance capability of wire is dependant on its ability to deliver DC power, and separately, to deliver high-frequency data signals.

The graph below shows maximum power delivery when using a 48V power supply. If you are using a 56V power supply, your distances will be 2.6 times those shown in the graph. If you are not delivering power to your camera (or other remote device), then this graph does not apply. The graph on the next page shows the maximum data delivery rate.

A Distance Calculator can be found at www.nvt.com.

PoE devices require a minimum of 43V to operate. With a 48V supply, we have 5V of allowable voltage drop on the wire. With a 56V supply, we have 13V of allowable voltage drop on the wire.

The voltage will dip in proportion to the remote (camera) load. The graph below shows what PoE power distances are supported for various loads and wire types.

- Start with the camera wattage at the left. Sometimes IP cameras are listed as to their PoE Class rather than wattage. If this is the case, use the colored classes instead.
- Now read over to the right until you find your kind of wire. Then look up (feet) or down (meters) to find your maximum wire distance.
