

Product Information and Instructions Green Label Exterior Wood Filler

Description

Brummer Green Label is a unique ready mixed top quality natural product for filling small holes and splits in exterior timber. It is ideal for window frames, garden furniture, cladding, caravans and stonework, it is waterproof and impervious to sea water so may be used on boats above and below the water line.

Available in fifteen natural wood shades. Adheres to bare wood, nails, screws, plaster, iron and stonework. May be drilled and sanded just like the wood itself and can be used under nearly all types of decorative finish, including paint and varnish.

The product has been tried and tested for over eighty years by wood craftsmen and is used by nearly all the leading double glazing, conservatory and garden furniture manufacturers.

Technical Information

A fluid paste made from only the best materials available in a wide range of popular wood shades. Flammable with a flash point of 25 degrees Centigrade.

Preparation

Ensure that the area to be filled is clean, dry and free from any particles of dust or grease which may prevent the filler adhering properly.

Application

Green Label may be used and applied in a similar way to Yellow Label but it is slightly more fluid and when using on outdoor furniture or woodwork it is important to wipe away any excess immediately to avoid possible discolouration of the surrounding surfaces. Using a clean palette knife or similar utensil, apply the stopping firmly to the hole or crack to be filled. Allow to dry for at least an hour, preferably longer, and sandpaper off any surplus. The filler must be allowed to dry fully and set hard before painting or varnishing otherwise the paint may crack or blister.

Normally only one application is necessary but fairly deep cracks should be filled in layers, allowing each one to dry before applying the next. For larger areas such as knot holes, plug with a piece of wood, glue into place and then fill with Brummer. For major repairs where sections of timber need to be replaced or built up, we recommend our Two Part Filler which may be shaped and carved to replace joints, edges and corners.

Brummer can be mixed with most stains or dyes to match more unusual wood colours. Using a clean flat surface scoop out a little of the filler and add the stain gradually to achieve the desired colour.

The filler may appear a shade darker before use but will lighten when dry. It is advisable to use a shade of Brummer close to the colour you require and then add stain for a perfect match. When set the filler may be painted or finished like the surrounding wood and will accept most types of fixings.

Always try a sample area first

Test a sample by mixing with a small of stain and allow to dry. Coat with varnish or lacquer so you can check the colour match before final application. The filler will not be the same density as the wood itself and may absorb stains and dyes at a different rate. When using a stain or dye it is only possible to darken or redden the colour of the Brummer, not to lighten it. However you can also mix different shades of Brummer together to achieve different colours and lighten it by mixing with white.

After correct application the filler will flex slightly with the natural movement of the wood and should not crack or split.

To achieve a really natural effect, use a fine artist's brush and colours to apply light feathery strokes, giving a natural grain effect. This is also useful when filling a small hole or blemish in a piece of wood that is already finished. Apply the filler carefully, using your finger or flexible plastic spatula, being careful not to scratch the surrounding area and remove any surplus immediately. Allow to dry and finish the area to blend with the surrounding wood.

If the product has stiffened a little in the tin, add a little cellulose lacquer to soften and make it pliable and easier to apply.

A selection of uses in the home include exterior windows, doors, conservatories, metal down pipes and gutters, cladding, garden furniture and stonework. Professional uses include exterior joinery, decking, sign making, caravan manufacturing, boat construction and repair.

Storage

Store in a cool dry atmosphere, not subject to extremes of temperature. Always replace the lid and keep the container tightly closed, and the product should remain useable for at least 18 months.

STORE AWAY FROM CHILDREN AND PETS.

Packaging

Available in small (225g) medium (625g) and large (2.25 kg) tins

MADE IN THE U.K.
