The Avaya Ethernet Routing Switch 5900 Series is a premium Stackable Chassis system providing highperformance, convergence-ready, resilient and more secure Ethernet switching connectivity. Supporting Avaya Fabric Connect, it also delivers virtual fabric services to the network edge / wiring closet environment. Available in 4 model variants supporting 10/100/1000 switching and routing, 40 uplink capacity Gbps (4 x SFP+) and Powerover-Ethernet+. the **Ethernet Routing** Switch 5900 is ideally suited for high-end wiring closet and network edge deployments.

Avaya Ethernet Routing Switch 5900 Series

Highlights of the Ethernet Routing Switch 5900

- Always-on Best in class end-to-end resiliency solution, hot-swappable unit replacement within a Stack Chassis and integrated power redundancy.
- **Convergence-ready** Support for PoE and PoE+, optimized for high-definition video surveillance, true plug and play capabilities for IP Phone deployments, advanced QoS capabilities.

- **Powerful** Wire-speed performance, true pay-as-you-grow Stackable Chassis capabilities, delivering up to 400 ports, 672 Gbps of virtual backplane throughput, and up to 40 Gbps uplink capacity.
- Fabric-enabled Support for Avaya Fabric Connect that extends virtual fabric services from the data center all the way to the wiring closet.
- **Comprehensive Layer 3 Services –** Advanced routing features enable traffic segregation ideal for network distribution and core applications.
- Mitigates Risk Standards-based IEEE 802.1X with integration with Avaya's Identity Engines portfolio for centralized, policy-based authenticated network access. Also MACsec-ready (IEEE 802.1AE) for encryption-based protection services.¹
- **Flexible** Mix-and-match best-in-class stacking capabilities with support for PoE/PoE+ and optional 1GbE / 10GbE SFP+ uplinks.

The Ethernet Routing Switch 5900 Series provide resilient Stackable Chassis capabilities, high-performance Layer 2 switching, Layer 3 routing, advanced convergence features and a full suite of security, QoS and management capabilities.

The ERS 5900 hardware is based on next-generation ASIC technology that combines wire-speed performance and non-blocking throughput with sophisticated QoS capabilities to support even the most demanding suite of applications. It can be positioned for a variety of customer scenarios, including:

- High-end wiring closet with advanced convergence features, including PoE/ PoE+, QoS, comprehensive security risk mitigation and up to 40 Gbps uplink capacity, the ERS 5900 is a flexible highperformance switching option for converged edge deployments.
- Network distribution switch for campus its Layer 3 routing services and highperformance make the ERS 5900 a powerful aggregation or distribution solution for both mid-market and large enterprises. It can connect either to core switches or directly to data center servers while reducing latency and providing high end-to-end performance.

Intelligent Stackable Chassis solution delivering performance, scalability, resilience and flexibility

Avaya introduced its first Stackable Chassis product in 1998 and we've been perfecting the technology ever since. We offer genuine chassis-like features including true pay-as-yougrow scaling, in-stack switch replacement and restoration. From a management perspective, our Stackable Chassis looks like a single network entity – utilizing only a single IP address to dramatically simplify software upgrades.

High performance architecture with true pay-as-you grow scaling

Our Stackable Chassis products combine non-blocking internal switching fabrics with high-speed virtual backplane architecture to deliver a high performance solution that scales proportionally as new switches are added. The ERS 5900 Series can scale up to 672 Gbps of virtual backplane throughput by simply cabling together up to 8 units. Adding a new unit to the Stack Chassis is as easy as cabling in a new member, then extending the appropriate configuration. The necessary software images and the configuration file are automatically downloaded to the new unit and then brought on-line without any user intervention.

All ERS 5900 models come with two built-in Stackable Chassis interfaces for simple, cost-effective and efficient connectivity. Unlike comparative offerings which daisy chain low-speed interfaces, this design frees uplink ports for dedicated connectivity to

ERS 5900 Series Models

Avaya Ethernet Routing Switch 5900 Series		
Model	Link and Uplink Ports	
ERS 5928GTS	24 x 10/100/1000BASE-T ports, plus 4 x SFP+ uplink ports	
ERS 5928GTS-PWR+	24 x 10/100/1000BASE-T ports supporting 802.3at PoE+, plus 4 x SFP+ uplink ports	
ERS 5952GTS	48 x 10/100/1000BASE-T ports, plus 4 x SFP+ uplink ports	
ERS 5952GTS-PWR+	48 x 10/100/1000BASE-T ports supporting 802.3at PoE+, plus 4 x SFP+ uplink ports	

the backbone. In addition to the stacking cables, a return cable is also used to protect against any port, unit or cable failures.

Figure 1. ERS 5900 stack back view with stacking cables, fans and power supplies

In-stack switch replacement and restoration

Virtual hot swap capabilities enable any failed switch unit of the Stackable Chassis to be quickly and easily replaced with a like-for-like switch without any impact to the existing traffic or any units. If a failure occurs, neighboring switches automatically wrap their fabric connections so that other switches within the Stackable Chassis are not impacted. The failed unit is simply disconnected from the virtual backplane and, without prestaging of software or configuration, a like-for-like unit is inserted, cabled, and powered-up. The Automatic Unit Replacement (AUR) process selfmanages software and configuration downloads to the new switch then brings it online, without the need for an engineer to configure or manage the process.

Further complementing the Stackable Chassis architecture, the Avaya ERS 5900 Series supports standardsbased 802.3ad Link Aggregation as well as Avava's own Multi-Link Trunking technology that allows grouping of links to form high-speed trunks/aggregations. Groups of links between the ERS 5900 and another device can be aggregated (or trunked) to enhance bandwidth and resiliency through active redundant links. Additionally, trunked links can span different units in the same Stackable Chassis, enabling more failsafe connectivity to mission critical servers and the network core.

Stack health-check monitoring, a realtime, at-a-glance view of operational status and health further enhances operational and management simplicity.

Redundant power support

The ERS 5900 models support fieldreplaceable AC power supplies for improved redundancy and uptime. This power supply design offers N+1 power redundancy and/or supplementary POE/POE+ power budget, saving valuable rack space and enabling reduced system servicing and sparing costs. Non-PoE models utilize two 450 Watt Power Supply Units for redundancy, and PoE+ models utilize two 1400 Watt Power Supply units for redundancy.

Front-to-back and back-tofront cooling options

The ERS 5900 is designed to support the specific environmental needs of the wiring closet or data center with both front-to-back and back-to-front cooling options in its fan trays and power supplies. This gives users the flexibility to conform to a variety of hot-aisle/cold-aisle deployment requirements.

Centralized management

From a management perspective, our Stackable Chassis appears as a single networking entity – utilizing only a single IP Address. This can significantly reduce the number of switches to be managed within the network as a stack of up to 8 switches can be managed just as easily as a single switch.

Convergence-ready for Unified Communications, High-Definition Video and more

For businesses looking to consolidate all forms of communication – voice, video and data – on a single infrastructure, the Avaya ERS 5900 Series delivers functionality that simplifies convergence of these technologies.

Support for IEEE 802.3at PoE+ to power your device

Through support for IEEE 802.3at PoE+ which delivers up to 32 Watts of power per port to end devices, ERS 5900s are able to power IP phones, wireless LAN access points, networked high-definition CCTV cameras and other devices. This eliminates the need for separate power supplies for each unit, enabling reduced cabling and management costs for adds, moves, or changes.

The 24-port and 48-port PoE+ enabled products (ERS 5928GTS-PWR+ and ERS 5952GTS-PWR+) support a maximum power budget of 800 Watts on a single power supply – enabling full 32 Watts of power on up to 24 PoE+ enabled access ports. With a secondary/redundant supply, full PoE+ power can be delivered to all 48 access ports.

Plug and play for IP phones

One of the main benefits offered by the ERS 5900 Series is plug and play support for IP phones enabled through a combination of IEEE 802.1AB Link Layer Discovery Protocol (LLDP) and Avaya's Auto Discovery and Auto Configuration (ADAC) capability.

With these features enabled, the ERS 5900 can automatically provision end devices such as IP Phones for simplified deployments and moves. The ERS 5900 dynamically applies the correct VLAN and QoS to both the IP phone and the attached edge port. When the phone is moved to another location, the configuration is automatically updated. In addition, QoS is automatically provisioned on the ERS 5900 uplink so that voice is given top priority from the wiring closet to the network core. These features save network operators time and can dramatically reduce the likelihood of a provisioning error during a large IP phone deployment.

Comprehensive QoS capabilities

The ERS 5900 series delivers the quality of service control needed for networks with a wide range of different application types. The ERS 5900 classifies, prioritizes and marks LAN IP traffic using up to eight hardware queues on every port – including the rear SFP ports.

Classification can be based on MAC address, IP ToS/DSCP marking, IP source/destination address or subnets, TCP/UDP source/destination port/port range, IEEE 802.1p user priority bits, ingress source port, IP Protocol ID (e.g., TCP, UDP, IGMP), EtherType (e.g., IP, IPX) or the IEEE 802.1Q VLAN ID. Comprehensive traffic policing and traffic shaping are also supported.

Avaya Fabric Connect to the Wiring Closet

All ERS 5900 models support Avaya Fabric Connect enabling fabric services to be extended from the Data Center all the way to the campus edge wiring closet. Based on an enhanced implementation of Shortest Path Bridging, an open, standardsbased and extensible fabric technology, Avaya Fabric Connect delivers an array of network services while providing a consistent enterprise-wide virtualization architecture that is simpler, more adaptive and reliable. With support on the ERS 5900, fabric services are delivered on a campus-grade stackable access switch and can be extended much closer to where applications and users actually connect to the network. The result is simplified provisioning of applications or services at a point much closer to their entry into the network eliminating complex hop-by-hop configuration and improving overall network resiliency.

Securing access at the edge

The Ethernet Routing Switch 5900 offers a higher level of security risk mitigation through authenticated network access that leverages IEEE 802.1X (Extensible Authentication Protocol (EAP)) with extensions or using a device's MAC Address. Integration into Avaya's Identity Engines portfolio for centralized. policy-based access control is included along with more secure management enabled through features such as Secure Shell (SSH), Secure Sockets Layer (SSL), Simple Network Management Protocol (SNMPv3), IP Manager List, Remote Authentication Dial-In User Service (RADIUS), and TACACS+ authentication. The ERS 5900 Series also offers numerous features that help prevent direct Denial of Service Attacks. Last but not least, ERS 5900 hardware is future-ready for MACsec (IEEE 802.1AE), which provides even higher levels of confidentiality and integrity for data traversing the network.

Energy Efficiency

New regulations and rising awareness of the ever-increasing cost of electrical power keep energy efficiency top of mind. An innovator in this area, Avaya has built energy efficiency into many of its hardware products. In fact, independent testing indicates that Avaya LAN Switches, Call Servers, Gateways, Unified Messaging Servers and Gigabit IP Phones are typically more energy efficient than competitive equipment. The ERS 5900 employs highly efficient power supplies and also supports dynamic power management where each port can be configured to limit the power delivered to a device and for power priority level—low, high, and critical.

Furthermore, the ERS 5900 supports Avaya Energy Saver which can further conserve energy by turning down port speeds during designated offpeak hours.

Lifetime Warranty

Avaya includes industry-leading warranty services for our portfolio of stackable switches, including the Avaya ERS 5900 Series products. The warranty includes complimentary next-business-day shipment of failed units for the life of the product, and basic technical support for the first 90 days. ERS 5900 lifetime warranty also provides complimentary access to new software updates.

Avaya is positioned to provide an end-to-end solution for converged networks. The Ethernet Routing Switch 5900 series, along with other Avaya products, can increase profitability and productivity, streamline business operations, lower costs and help your business gain a competitive edge.

Product Specifications

ERS 5928GTS

Switch Details	24 x 10/100/1000 Gigabit Ethernet ports Plus 4 x 1/10 Gigabit SFP+ ports Plus 2 x rear HiStack ports delivering up to 672 of Stackable Chassis throughput
	1 x out-of-band Ethernet port for management
	System CPU speed: 800 Mhz
	System Memory: 256 MB Flash, 1024 MB RAM
	Switch capacity and forwarding rate: 212 Gbps / 157 Mpps
	Ships with 1 set of 44 mm / 19' rack mount brackets
Dimensions:	4.4 cm - 1RU (H), 44.0 cm (W), 50.8 cm (D)
Weight:	6.92 kg
Power and Thermal	Supplied with 1 x 450 watt Field Replaceable AC power supply
	Supports second Field Replaceable AC power supply for redundancy
	Power consumption: 90 watts
	Thermal rating: 307 BTU/hour

Product Specifications (cont.)

ERS 5928GTS-PWR+

Switch Details	24 x 10/100/1000 Gigabit Ethernet ports supporting IEEE 802.3af PoE or IEEE 802.3at PoE+ 4 x 1/10 Gigabit SFP+ ports 2 x rear HiStack ports delivering up to 672 of Stackable Chassis throughput 1 x out-of-band Ethernet port for management System CPU speed: 800 Mhz System Memory: 256 MB Flash, 1024 MB RAM Switch capacity and forwarding rate: 212 Gbps / 157 Mpps Ships with 1 set of 44 mm / 19' rack mount brackets
Dimensions:	4.4 cm - 1RU (H), 44.0 cm (W), 50.8 cm (D)
Weight:	7.52 kg
Power and Thermal	Supplied with 1 x 1000 watt @120VAC or 1400 watt @220VAC watt Field Replaceable AC power supply Supports second Field Replaceable AC power supply for redundancy Power consumption: 230 watts @120VAC Thermal rating: 785 BTU/hour
PoE power output:	720 watts with single power supply

ERS 5952GTS

Switch Details	48 x 10/100/1000 Gigabit Ethernet ports Plus 4 x 1/10 Gigabit SFP+ ports Plus 2 x rear HiStack ports delivering up to 672 of Stackable Chassis throughput 1 x out-of-band Ethernet port for management System CPU speed: 800 Mhz System Memory: 256 MB Flash, 1024 MB RAM
	Switch capacity and forwarding rate: 260 Gbps / 193 Mpps Ships with 1 set of 44 mm / 19' rack mount brackets
Dimensions:	4.4 cm - 1RU (H), 44.0 cm (W), 50.8 cm (D)
Weight:	7.11 kg
Power and Thermal	Supplied with 1 x 450 watt Field Replaceable AC power supply Supports second Field Replaceable AC power supply for redundancy Power consumption: 95 watts Thermal rating: 324 BTU/hour

ERS 5952GTS-PWR+

Switch Details	48 x 10/100/1000 Gigabit Ethernet ports Plus 4 x 1/10 Gigabit SFP+ ports Plus 2 x rear HiStack ports delivering up to 672 of Stackable Chassis throughput 1 x out-of-band Ethernet port for management System CPU speed: 800 Mhz System Memory: 256 MB Flash, 1024 MB RAM Switch capacity and forwarding rate: 260 Gbps / 193 Mpps Ships with 1 set of 44 mm / 19' rack mount brackets
Dimensions:	4.4 cm - 1RU (H), 44.0 cm (W), 50.8 cm (D)
Weight:	7.11 kg
Power and Thermal	Supplied with 1000 watt @120VAC or 1400 watt @220VAC watt Field Replaceable AC power supply Supports second Field Replaceable AC power supply for redundancy Power consumption: 275 watts @120VAC Thermal rating: 938 BTU/hour
PoE Power output:	800 watts @120VAC; 1200 watts @220VAC with single power supply

Ordering Information

ERS 5900 Series Models	
AL5900?1*-E6	ERS 5928GTS featuring 24 x 10/100/1000BASE-T ports, plus 4 x SFP+ uplink ports
AL5900?2*-E6	ERS 5928GTS-PWR+ featuring 24 x 10/100/1000BASE-T PoE+ ports, plus 4 x SFP+ uplink ports
AL5900?3*-E6	ERS 5952GTS featuring 48 x 10/100/1000BASE-T ports, plus 4 x SFP+ uplink ports
AL5900?4*-E6	ERS 5952GTS-PWR+ featuring 48 x 10/100/1000BASE-T PoE+ ports, plus 4 x SFP+ uplink ports

Notes:

- Each Switch ships with a Base Software License and either a 450W (for non-PoE units) or 1400W (for PoE+ units) Power Supply Unit
- Stacking cables are not included and must be ordered separately
- The eighth character (?) of the order number must be replaced with the proper letter to indicated desired product nationalization.
- The tenth character (*) of the order number must be replaced with "F" for front-to-back or "B" for back-to-front cooling options

Stacking Cables for ERS 5900	
AA1404037-E6	0.5M Stacking Cable (QSFP+ to QSFP+) for ERS 5900
AA1404029-E6	1M Stacking Cable (QSFP+ to QSFP+) for ERS 5900
AA1404031-E6	3M Stacking Cable (QSFP+ to QSFP+) for ERS 5900
AA1404032-E6	5M Stacking Cable (QSFP+ to QSFP+) for ERS 5900

Power Supplies and Fan Trays for ERS 5900	
AL7000?0B-E6	450W AC Power Supply with Back-to-Front Cooling
AL7000?0F-E6	450W AC Power Supply with Front-to-Back Cooling
AL1905?3B-E6	1400W AC PoE+ Power with Back-to-Front Cooling
AL1905?3F-E6	1400W AC PoE+ Power with Front-to-Back Cooling
AL5900BTF-E6	Fan Tray for Back-to-Front Cooling on ERS 5900
AL5900FTB-E6	Fan Tray for Front-to-Back Cooling on ERS 5900

Note:

• The seventh character (?) of the Power Supply order number must be replaced with the proper letter to indicated desired product nationalization power cord option.

Software for ERS 5900	
380221	Advanced License for ERS 5900 (includes OSPF, PIM-SM, VRRP and ECMP)

General and Performance

Switch Fabric performance: 212Gbps to 260Gbps	802.1X Clients: up to 768
Frame forwarding rate: 96Mpps to 136Mpps	LLDP Neighbors: up to 800
Stack Throughput: 672Gbps (8-unit stack)	ARP Entries: up to 4096
Latency (64 byte packet): 3.5 microseconds	IP Interfaces: up to modified value
Frame length: 64 to 1518 Bytes (untagged), 64 to 1522 bytes	Total Routes = 4000
(tagged)	OSPF areas: up to 4
Jumbo Frame support: up to 9216 Bytes (tagged)	OSPF Adjacencies: up to 16
Multi-Link/LAG Trunks: up to 32 Groups, with 8 Links per Group	ECMP Paths: up to 4
VLANs: up to 1,024 Port/Protocol	VRRP Instances: up to 256
Multiple Spanning Tree Groups: 8	IPFIX Sampled Flows: up to 100,000
MAC Address: up to 32k	Auto-MDIX
DHCP Snooping: up to 1,024 table entries	QoS Priority Queues: 8
	Enterprise Device Manager GUI, on-box & off-box

Pluggable Interfaces	
 1000BASE-T SFP up to 100m over CAT5E or better UTP Cable (RJ-45) 1000BASE-SX SFP up to 550m reach on MMF (Duplex LC) 1000-BASE-LX SFP up to 550m reach on MMF, and up to 10 km on SMF (Duplex LC) 1000BASE-XD CDWM SFP up to 40 km reach on SMF (Duplex LC) 1000BASE-ZX CDWM SFP up to 70 km reach on SMF (Duplex LC) 1000BASE-EX SFP up to 120 km reach on SMF (Duplex LC) 1000BASE-BX SFP up to 10 and 40 km reach variants on SMF (LC) 	 100BASE-FX SFP up to 2km reach over MMF (Duplex LC) Ethernet-over-T1 SFP up to 2,874m reach over 22AWG Cable (RJ-48C) 10GBASE-SR SFP+ up to 300m reach over MMF (Duplex LC) 10GBASE-LRM SFP+ up to 220m over FDDI-grade MMF (Duplex LC) 10GBASE-LR SFP+ up to 10km reach over SMF (Duplex LC) 10GBASE-ER SFP+ up to 40km reach over SMF (Duplex LC) 10GBASE-X SFP+ Direct Attach Cables, in 3, 5, & 10m lengths

Environmental Specifications	
Operating temperature: 0°C to 50°C (32°F to 122°F)	Operating altitude: 0 to 3,048m (0 to 10,000ft) maximum
Storage temperature: -40°C to 85°C (-40°F to 185°F) Operating humidity: 0 to 95% maximum relative humidity, non- condensing	Acoustic Noise: less than 40dbA at 25°C; less than 53dbA at 50°C

Safety Agency Approvals	
IEC60950 International CB Certification	Anatel Brazilian Safety
EN60950-1 Europe Safety (CE); CB Scheme Certification with	ACMA-RCM Australia Safety
Member Deviations	GOST-R Russia Safety
UL60950-1 United States of America Safety	CCC & MIIT China Safety
CSA-C22.2, #60950-1 Canada Safety	CNS14336-1 Taiwan BSMI Safety
NOM Mexico Safety	
EN60950-1 Japan Safety	

Electromagnetic Emissions & Immunity	
CISPR22 International EMC Emissions	ACMA-RCM mark Australia EMC Emissions
CIRPR24 International EMC Immunity	Anatel Brazilian EMC Certification
FCC part 15B, Class A USA EMC Emissions	GOST-R Russia EMC Certification
ICES-003 Class A Canadian EMC Emissions	CCC & MIIT China EMC Certification
VCCI Japan EMC Emissions	KC mark: EMI & EMS Korean EMC Certification
EN55022 Class A, CISPR22 European EMC Emissions (CE)	CNS13438 Taiwan BSMI EMC
EN55024, CISPR24 including EN61000-4-2, 4-3, 4-4, 4-5, 4-6, 4-8 & 4-11 European EMC Immunity (CE)	

¹MACsec capabilities to be enabled in a future ERS 5900 software release

About Avaya

Avaya is a leading, global provider of customer and team engagement solutions and services available in a variety of flexible on-premise and cloud deployment options. Avaya's fabric-based networking solutions help simplify and accelerate the deployment of business critical applications and services. For more information, please visit www.avaya.com.
