

Conversion lenses

Lenses for fixed cameras with a M37-mount

Axis network cameras are equipped with carefully selected lenses to provide the best possible performance and durability. Axis offers conversion lenses with magnifying features, thus extending surveillance possibilities whilst maintaining excellent image quality. A wide-angle conversion lens is specially designed to broaden the angle of view of the network camera. A telephoto conversion lens is recommended for those installations where long distance subject needs to be monitored. Moreover, they are tested and approved optional lenses that are suitable for fixed cameras with a M37-mount.
