FLUIDMESH 1300 OTTO

FLUIDMESH NETWORKS

POWERFUL WIRELESS BACKHAULING

The FM 1300 OTTO is designed and manufactured for backhauling mission-critical video, voice and data. The FM 1300 OTTO can be used to create point-to-point links with a throughput up to 500 Mbps.

REDUCE THE COST OF NETWORK OWNERSHIP
SELECT THE AMOUNT OF THROUGHPUT YOU NEED

Limit the cost of network ownership with FluidThrottle by selecting only the amount of throughput required. More throughput can be easily achieved by upgrading the system with software plug-ins when the traffic requirements increase.
This solution makes Fluidmesh Networks the most cost effective and flexible wireless solutions provider in the market.

PRODIGY 2.0 FOR RELIABLE MISSION-CRITICAL APPLICATIONS

Our MPLS-based transmission protocol is built to overcome the limits of standard wireless protocols and to deliver an infrastructure with a higher level of reliability. At the base of our innovative transmission protocol, there is a traffic optimization algorithm that allows every Fluidmesh radio to assign a specific level of priority and reliability to every packet transmitted. The result is a better, more reliable, multi service wireless infrastructure.

WEB INTERFACE CONFIGURES, MONITORS AND TROUBLESHOOTS THE WIRELESS NETWORK

The FM 1300 OTTO includes the FMQuadro web interface that allows you to configure, monitor, and troubleshoot the wireless network in real time, without any additional software. To simplify the configuration of the wireless network, the radio has a built-in real-time bandwidth monitoring tool.

EASY INSTALLATION

To facilitate installation it has an easy NPT thread for conduit. The visible LEDs help you understanding the LAN activity and the strength of your signal. The POE injector guarantees an easy setup.
