

# Introducing Prism Vision

Explore your business from anywhere using advanced computer vision technology

The Vision mobile app transforms ordinary video into meaningful summaries that can be quickly understood, shared and acted upon. Using A.I., Vision surfaces video's largely untapped value by helping you quickly understand all that's happening within your business.

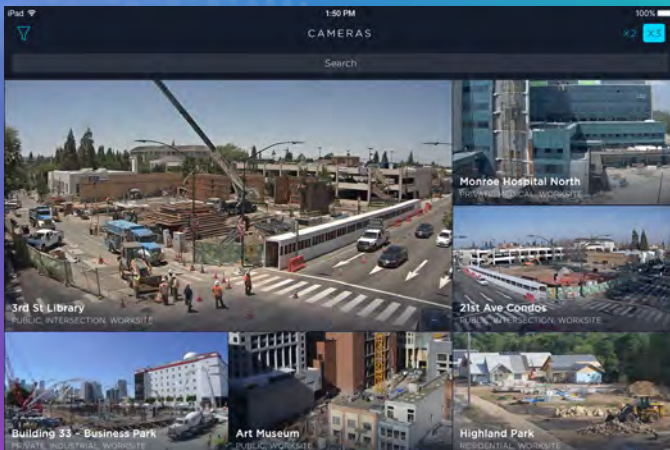

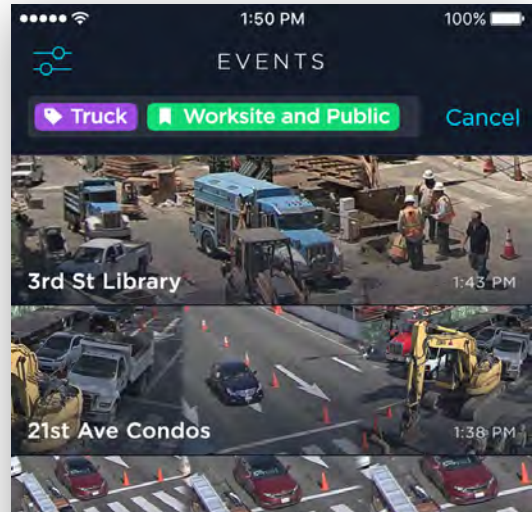

## Instant understanding

Vision filters hours of video into quickly digestible visual summaries. Tapestries, Flipbooks and Live Tiles provide an at-a-glance overview of the activity captured by your cameras.

## Powerful search

Search for specific objects in your video (i.e. truck) using Prism's smart-tagging technology. Over time, Prism's search can be trained to become smarter and more accurate.

## Data how you want it

Configure events to display views of the most relevant activity to your business.

## Capture and share

Unlimited storage of metadata, securely in the cloud. Up to 10 TBs of HD video archived and available when you need it.

## Your data, forever

Save and share your video data across an unlimited set of users.
