The IR transmitter and receiver must be perfectly aligned in order to achieve the optimal operation of the photoelectric detector. However, a great deal of patience, time and effort is required to ensure that the receiver is receiving the maximum amount of infrared signal possible from the transmitter. Optex has the solution the SL series is designed to lighten your workload while achieving perfect alignment.

SNIPER VIEWFINDER™

X2 MAGNIFICATION LENS

The new telescope lens has a high level of visibility for optical alignment work. Even over long distances, a perfect installation and stable performance can be achieved in a short period.

BEAM ALIGNMENT UNIT: BAU-4 (option)

The BAU-4 beam alignment unit automatically and accurately adjusts the optical axis. This allows peak performance and gives one technician the ability to install the 200 m (650 ft.) Smart Line detector by himself.

LED INDICATOR AND SOUND ASSIST

SL-QDM:TRANSMITTER AND RECEIVER SL-QDP: RECEIVER only

The alignment level indicators have 5 LEDs, each LED represents the level of alignment, ranging from poor to excellent. The optical alignment level can also be checked by sound.

RECEIVER

UPPER/LOWER **BEAM SELECTION BUTTON**

SL-QDM/SL-QDP only: TRANSMITTER AND RECEIVER

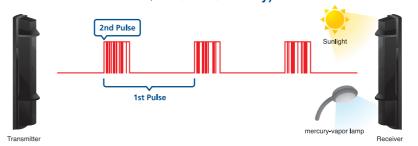

Optical alignment can be done without using a beam blocking plate since the SL has upper/lower beam selection button which enables to turn on and off the upper and lower beam alternately in the installation mode.

Double Modulation Beam (SL-QDM/QDP only)

The SL-QDM and SL-QDP series offer double modulation beams that differ in pulse patterns. This can enhance signal discrimination against potential noise interference such as sunlight or other external light sources, resulting in a reduction of missed or false alarms. Together with OPTEX triple layered Sunshine Protection Technology, it ensures high reliability under the severe outdoor security environment.

QUAD BEAM & UNITED APPEARANCE

By employing quad beam, it dramatically reduces false alarm caused by birds and falling leaves. Moreover, it is also important that the housing design of both long and short beams is harmonised. 60m (200ft.) range models, SL-200QN/SL-200QDP/SL-200QDM with a wide beam pitch is now available.

Conventional short beam

IP65 WATER/DUST PROTECTION

Rubber seals is used for all conceivable points where water or dust may penetrate, such as wiring holes, wire ports and the outer openings on chassis.

UV-resistant POLY CARBONATE COVER

Front cover is not clouded by ultraviolet ray during a long term. Therefore it will maintain the transparency of IR beams.

SLIM BODY & LIGHT WEIGHT

20% reduction of the body size and 15% reduction of the weight come together in the SL series.

BEAM BLOCKING PLATE

The plate can firmly be fixed on the lens unit without fear to be blown off by wind. The plates can be stored in the back of the front cover.

ANTI FROST DESIGN (Hood design)

The hoods are positioned on both the upper beam and the lower beam to secure a high and stable beam power by preventing frost from attaching to the front cover.

VIVID INTERIOR COLOR

Easy-to-see vivid interior color for optical alignment.

ALIGNMENT DIAL

The alignment no longer requires a screwdriver. All you need is touch with your fingers for precise adjustment.

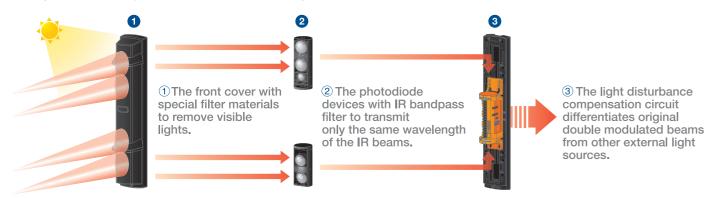

QUAD BEAM WITH ASPHERICAL LENSES

The high-grade aspherical lens create more sharply defined and precise active infrared beams.

ENVIRONMENT RESISTANCE

SUNSHINE PROTECTION TECHNOLOGY (SL-QDM/SL-QDP only)

The sunshine protection technology has a triple layer construction to give better performance against external light sources (e.g.:The sun, mercury-vapour lamps, and fluorescent lights).

BEAM POWER CONTROL SELECTOR (SL-QDM/SL-QDP only)

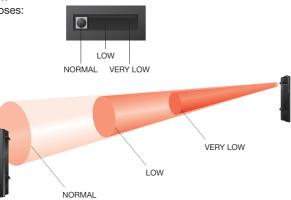

The beam power control selector allows you to manually adjust beam power from NORMAL to LOW or VERY LOW. This function is effective for the following purposes:

For countermeasure against crosstalk due to reflection of wall or floor by reducing beam power.

For countermeasure against interference due to unstable S/N (signal / noise) ratio when using multiple photo beams for long distance or beam stacking applications.

To reduce beam power when using the detector for a distance shorter than the rated distance.

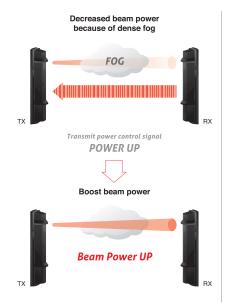

To search the peak value when making optical alignment to support perfect alignment.

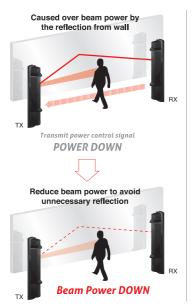

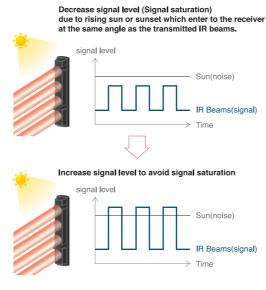

A.T.P.C.-AUTOMATIC TRANSMIT POWER CONTROL (SL-QDM only)

Automatically controls, adjusts and optimizes the power of the beam and maintains optimal performance. It decreases false and missed alarms caused by fog, frost, cross talk, and signal saturation.

Detection range	100m/350ft.	100m/350ft.	
Beam frequencies	4ch selectable	-	
Power source	Recommend: 3.6 V, 13.0Ah LSH20 lithium batteries manufactured by SAFT Operating range: 3.2 V - 4.0 V lithium batteries Transmitter: 2 or 4 units, Receiver: 2 or 4 units		
Current consumption	745µA		
Operating temperature	-20°C - +60°C (-4°F - 140°F)		
Water protection	IP65		
Dimensions H x W x D	452 (17.9) x 83 (3.3) x 138 (5.4) mm(inch)		
Weight	3300 g		

OPTION

Replacement battery Rechargeable Li-ion Battery Pack

LB-4

Approx. 2900 mAh

SOLAR BATTERY UNIT (OPTION)

LOW BATTERY OUTPUT

FEATURES

- · Small size and light weight Li-ion battery pack
- · Long battery life Non-sunshine days : approx. 7 days
- · Spacious back box for wireless transmitter Battery common use unit (BCU-4 option)
- Anti-bird needle Included

Specifications

Model	SBU-4	
Recharging time	Approx. 1 hour on sunshine day Approx. 6 hours on cloudy day	
Charging battery protection circuit	Charging is suspended at approx5°C or less,or approx. 60°C or more.	
Low battery output	Form C relay: 28 VDC, 0.2 A Low battery detection voltage: 3.4 V	
	Horizontal: ±180° (30-degree pitch)	
Alignment angle	Vertical: +15 - +90° (5 °pitch)	
	Under eave mounting: +0 - +55° (5° pitch)	
Mounting	Wall /horizontal surface/pole
