

2000 Series Stainless Steel Picks

Stainless Steel - Using a patented cutting process, these picks are made from top-quality stainless steel. This provides for additional strength. Plus, the steel is thinner making the blades even more flexible. This combination is the secret behind the excellent performance of the 2000 Series picks and extractors.

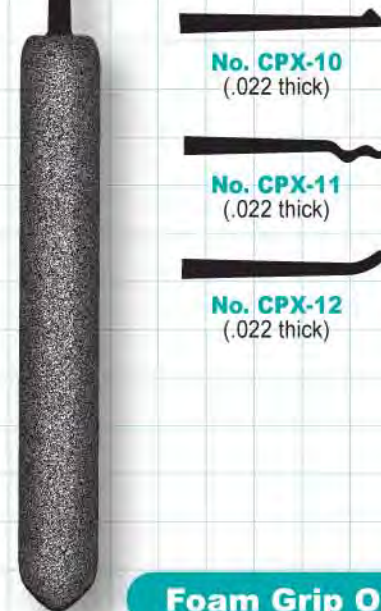

Color Coded Picks

Color Coded Picks - HPC's unique color coded picks add an improved level of efficiency in identifying the picks in your case. The aluminum handles provide a lighter feel than stainless steel handles and the bright colors make it easier to instantly identify the type of tool you need.

Spring Steel Pick with Foam Grip

These **Spring Steel Picks** feature a super-lightweight super-soft grip for comfort, while retaining the feel necessary during picking.

Foam Grip Only

Soft Foam **Pick Grip** fits picks and extractors with or without metal handles. No adhesive required. It is 3/16" (4.75mm) round and the inside diameter expands to also fit on other tools.

No. PICK GRIP
