

## Safes and Vaults

### Safe work is a high-profit, specialized service.

With the proper skills, tools and reference books you can become an expert safe technician. HPC offers three books important for servicing safes.

### The Art of Manipulation

Manipulation, also known as the "Hear, Feel and See" method, was discovered and developed by a small group of safe experts. After much deliberation, two of these experts decided to pass on their information to other safe professionals and published this invaluable book. Open combination locks without drilling, burning or forcing! This book was written for locksmiths and safe professionals to teach the techniques needed for opening and servicing safes. **The Art of Manipulation illustrates the step-by-step procedures needed to manipulate lever type fence locks.** Additionally, it explains the methods used in the rotary fence gear driven, rotary fence spring loaded, straight in tail piece, bottom drop and off-set gear driven type locks.

Information for modern safe locks is readily available from the manufacturers and importers. However, **as a Safe Professional you need to be prepared to service the classic safes** that were built to last for decades.

### Safe and Vault Manual

The Safe and Vault Manual covers the important topics of drilling locations, changing the handing of the safe, servicing the lock and time lock operation on a wide variety of safes and vaults dating back to the early 20th century. This enduring reference manual includes **over 250 illustrations, 1000 factory try-out combinations** as well as the directions for operating and changing the combination of safe and vault locks (as found in the Safe Combination Changing Manual).

### Safe Combination Changing

The Safe Combination Changing Manual contains original direction sheets that explain how to operate and change the combination on a wide variety of classic safe locks dating back to the early 20th century. This invaluable reference contains **85 pages and hundreds of illustrations and diagrams** as written by the safe lock manufacturers, including Diebold, Eagle, Mosler, Sargent & Greenleaf, Yale and York safe locks.
