TKM. XTREME KIT

TKM. Xtreme Kit is the only system in the world that can clone **Megamos® Crypto ID48** transponders used by several car makes. The extraordinary performance of Keyline cloning devices offers an exceptional level of flexibility, that considerably widens the range of applications: **884 Decryptor Mini** with the latest generation Keyline Cloning Tool App and **884 Decryptor Ultegra** with the powerful Keyline Cloning Tool software for the PC (with Windows 7 and higher).

TKM. Xtreme Kit makes it possible to clone **Megamos® Crypto ID48** transponders of many car makes, including several Volkswagen, Audi, Porsche, Cadillac, Chevrolet, Citroën, Ferrari, GMC, Hummer, Isuzu, Jeep, Maserati, Pontiac and Volvo models, totaling over 50 models available to date.

TKM. Xtreme Kit is a software update that enables the cloning of **Megamos® Crypto ID48** transponders with Keyline TKM heads. The activation is enabled by inserting the TKM. Xtreme electronic head in your device while connected to the Keyline Cloning Tool app for phone, tablet or PC. Once activated, the head can then be subsequently reused as a standard new TKM head.

Thanks to the addition of the **TKM. Xtreme Kit**, **884 Decryptor Mini** and **884 Decryptor Ultegra** can clone almost 2,000 car models: up to 95% of the cars, trucks and motorbikes from the past 20 years still on the road today.

TKM. Xtreme Kit is the innovative result of Keyline's constant research and development to achieve the latest technological advances for all automotive professionals.
