# **High Bond Adhesive Backed Mounts**

#### specifications

High bond adhesive backed mounts shall utilize multi-purpose acrylic adhesive on both sides of conformable foam. The adhesive shall provide excellent adhesion to a broad range of high and medium surface energy substrates including metals, glass, and a wide variety of plastics. The conformable foam shall provide good contact, even with mismatched substrates.\*

## Super-Grip® High Bond Adhesive Backed Mounts

SGABM20-AV-C300:

0.75" (19.1mm) x 0.75" (19.1mm)

SGABM25-AV-C300:

1.00" (25.4mm) x 1.00" (25.4mm)

SGABM30-AV-C300:

1.12" (28.6mm) x 1.12" (28.6mm)

#### technical information

Material:	SGABM: Heat stabilized weather resistant Nylon 6.6 with high bond adhesive				
Temperature range:	SGABM: -31°F to 200°F (-35°C to 93°C) continuous				
Solvent and fuel resistance:	Water, salt water, hydraulic fluid, 10W30 motor oil, glycol antifreeze – 100% adhesive retention.  Kerosene – 90% adhesive retention.  Isopropyl alcohol, jet fuel – 50% adhesive retention.  Gasoline – 35% adhesive retention.				
Environmental compliance:	RoHS compliant				
Application environment:	Indoor/outdoor				

### key features and benefits

High bond adhesive	Provides maximum adhesion, especially in harsh, high temperature, outdoor environments; extending service life				
Smooth surfaces and rounded edges	Protect the cable bundle and the installer; improving productivity, job site safety and reliability				
Flexible, lightweight material	Easily handled; improving productivity				

### applications

Panduit high bond adhesive backed mounts are a reliable and cost-effective solution for securing wires and cables in demanding applications, such as harsh environments. These mounts can be utilized in the alternative energy, mass-transit rail, control panel,

marine, heavy equipment, white goods, and automotive industries. The conformable nature of the acrylic foam core allows for a strong bond to a variety of substrates. This tape has also demonstrated excellent performance when bonding to relatively irregular surfaces.\*

#### application techniques\*

- 1. Bond strength is dependent upon the amount of adhesive to surface contact developed. Firm application pressure develops better adhesive contact and thus improves bond strength.
- 2. To obtain optimum adhesion, the bonding surfaces must be clean, dry, and well unified. A typical surface cleaning solvent is isopropyl alcohol and water. Use proper safety precautions for handling solvents.
- 3. Ideal tape application temperature range is 21°C to 38°C (70°F to 100°F). Initial tape application to surfaces at temperatures below 15°C is not recommended because the adhesive becomes too firm to adhere readily. However, once properly applied, low temperature holding is generally satisfactory.

NOTE: Some paint systems and plastics contain additives which can influence adhesion. Adhesion to these surfaces should be evaluated carefully; the effects of these additives can often be overcome by proper cleaning and surface preparation. High humidity/high temperature environments can also affect adhesion to glass due to the hydrophilicity of glass. Under these environments a silane coupling agent (adhesion promoter) has been found to enhance the durability and strength of the bond.
