

NV-LSA40PDS Local Source Power Distribution Hub (Fig. 54)

The LSA40PDS Power Distribution Hub provides a compact method for distributing the necessary power for up to four LSA40 Local Source Amplifiers from one central location. The LSA40PDS distributes the power over 16-AWG two conductor speaker wire to each of up to four individual LSA40 amplifiers. Connecting the LSA40 to the NuVo Control Pad and speakers is identical to the individual zone installation diagramed on page 37, Fig. 53. Note that if you are using the NV-LSA40PDS the needed SKU for each zone amplifier is the LSA40 which is the local source amplifier with no power supply.
